Responsibilities

- Managing technical support tickets for students who are facing issues with the institute's online learning platform.
- Consulting students on post-course procedures and job market account creation.
- Creating work pipelines for instructors and staff to organize their work processes.

📁 Projects

U-Wallet, A Mobile Financial Service app

We've created a new MFS app where underage people can create accounts and manage their money and Transactions. Adults can add their money from banks and other MFS directly but underage users must request money from their family members. It's a new idea in the field of Fintech in Bangladesh

Technologies Used: Flutter, Firebase, RestAPI

Aski, An interactive study solution Platform

In this platform, a student can upload their questions and other students can help them solve those and earn reward points. They can also hire skilled instructors hourly to get help with their studies.

Technologies Used: **Html, CSS, Bootstrap, PHP, MySQL, Javascript**
